

# Are your LIFE SAVING DEFIBRILLATORS ready and working when you need them?

As facility manager, you are responsible for ensuring your emergency equipment is fully operational at all times.

Expired pads, flat batteries and undetected faults can render your defibrillator useless.

**Our range of AED 'SMART' cabinets continuously monitor your defibrillators (AEDs) remotely to ensure they are present and fully operational at all times.**

If your AED is accessed or removed, you and your team are notified by SMS in real time.

# A READILY ACCESSIBLE, FUNCTIONING DEFIBRILLATOR (AED) IS AN IMPORTANT PART OF YOUR SAFETY AND RISK MANAGEMENT STRATEGY

How **Remote AED Monitoring** works:

We can supply new AEDs or monitor most current AEDs

Our **Remote AED Monitoring** system provides:

## **24/7 AED Vigilance**

Our Remote AED Monitoring system provides 24/7 vigilance, ensuring your AEDs are always available and functional.

## **Immediate Alerts**

Receive instant SMS and email if an AED is removed. Can be integrated with your building management system for a cohesive response in an emergency.

## **Proactive Maintenance**

Management and proactive replacement of electrodes and batteries to ensure AED is compliant, operational and always ready for use.

## **Efficiency Guaranteed**

Saves time, reduces costs, and mitigates risks associated with managing AEDs including deterring tampering and theft.

## **Future Ready**

Pre-emptive planning and management of AED fleet in preparation for increasing compliance requirements.

## **Scalable Solutions**

Suitable for managing one or multiple sites using either new or existing AEDs.
